Office Action Summary

Application No.

09/828,324

Applicant(s)

AMIN ET AL.

Examiner

Cicely Ware

Art Unit

2634

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on amendment filed on 15 November 2004.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-12 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☒ Claim(s) 9-12 is/are allowed.
- 6) ☒ Claim(s) 1,3,4,6 and 8 is/are rejected.
- 7) ☒ Claim(s) 2,5 and 7 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 15 November 2004 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see **REMARKS**, filed 11/15/2004 with respect to the rejection(s) of claim(s) 1, 4-6, 9 and 10 under 35 USC 102(e) and 35 USC 103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Garth (US Patent 6,259,743), Shen (US Patent 5,416,845) and Gevargiz et al. (US Patent 6,301,313).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Garth (US Patent 6,259,743).

(1) With regard to claim 1, Garth discloses a method of equalizing a radio frequency (RF) signal comprising: generating a cost function using amplitude and phase components of the output signal of an equalizer (col. 1, lines 14-16, 19-21, 25-27, 53-57, 66-67, col. 2, line 1, 28-38, col. 3, lines 29-47, col. 5, lines 26-34); minimizing said cost function using a gradient recursion algorithm; and adjusting the tap weights of said

equalizer using the result of said gradient recursion algorithm (col. 7, lines 36-39, 42-67, col. 8, lines 10-32).

However Garth does not disclose the gradient recursion algorithm.

Official Notice is taken that the concept and advantages of using a gradient recursion algorithm is well known in the art.

It would have been obvious to one of ordinary skill in the art to modify Garth to incorporate the gradient recursion algorithm, as this algorithm is known in order to provide for automatic phase recovery and minimize the cost function.

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Garth (US Patent 6,259,743) as applied to claim 1, in view of Shen (US Patent 5,416,845).

With regard to claim 3, claim 3 inherits all the limitations of claim 1. However Garth does not disclose wherein said gradient recursion algorithm is defined by the equation $w_{k+1} = w_k - \mu_m \text{gradient}.J_{sub.m}(w)$ - vertline $w = w_{sub.k}$, where: w_{k+1} is a tap weight vector at the $k+1$ instant, $w_{sub.k}$ is said tap weight vector at the k th instant, $\mu_{sub.m}$ is the gradient step size, and $\text{gradient}.J_{sub.m}(w)$ is the gradient of said cost function.

However Shen discloses wherein said gradient recursion algorithm is defined by the equation $w_{k+1} = w_{sub.k} - \mu_{sub.m} \text{gradient}.J_{sub.m}(w)$ - vertline $w = w_{sub.k}$, where: w_{k+1} is a tap weight vector at the $k+1$ instant, $w_{sub.k}$ is said tap weight vector at the k th instant, $\mu_{sub.m}$ is the gradient step size, and $\text{gradient}.J_{sub.m}(w)$ is the gradient of said cost function (col. 2, lines 29-44, col. 4, lines 1-40).

Therefore it would have been obvious to one of ordinary skill in the art to modify Garth in view of Shen to incorporate wherein said gradient recursion algorithm is defined by the equation $w_{k+1} = w_k - \mu_m \cdot \text{gradient}.J_m(w)$, where: w_{k+1} is a tap weight vector at the $k+1$ instant, w_k is said tap weight vector at the k th instant, μ_m is the gradient step size, and $\text{gradient}.J_m(w)$ is the gradient of said cost function for rapid convergence to ensure short adaptive responses to transient noises (Shen, col. 3, lines 29-31).

5. Claim 4 and 6 are rejected under 35 U.S.C. 103(a) as being obvious over Gevargiz et al. (US Patent 6,301,313) in view of Garth (US Patent 6,259,743).

(1) With regard to claim 4, Gevargiz et al. discloses an apparatus for receiving a radio frequency (RF) signal comprising: at least one antenna for receiving the RF signal; at least one tuner for selecting the RF signal from a desired frequency band; an equalizer (col. 1, lines 23-30, col. 4, line 38).

However Gevargiz et al. does not disclose an equalizer having a plurality of tap weights; and a modified constant modulus algorithm (M-CMA) circuit for adjusting said plurality of tap weights.

However Garth discloses an equalizer having a plurality of tap weights; and a modified constant modulus algorithm (M-CMA) circuit for adjusting said plurality of tap weights (col. 1, lines 14-16, 19-21, 25-27, 53-57, 66-67, col. 2, line 1, 28-38, col. 3, lines 29-35, col. 5, lines 26-34, col. 7, lines 36-39, 42-67, col. 8, lines 10-32).

Therefore it would have been obvious to one of ordinary skill in the art to modify Gevargiz et al. in view of Garth to incorporate disclose an equalizer having a plurality of tap weights; and a modified constant modulus algorithm (M-CMA) circuit for adjusting said plurality of tap weights for automatic phase recovery (Garth, col. 7, lines 19).

(2) With regard to claim 6, claim 6 inherits all the limitations of claims 4 and 1.

6. Claim 8 is rejected under 35 U.S.C. 103(a) as being obvious over Gevargiz et al. (US Patent 6,301,313) in view of Garth (US Patent 6,259,743) as applied to claim 6, in further view of Shen (US Patent 5,416,845).

With regard to claim 8, claim 8 inherits all the limitations of claim 6. Gevargiz et al. in view of Garth disclose all the limitations of claim 6 above. However Gevargiz et al. in view of Garth do not disclose wherein said gradient recursion algorithm is defined by the equation $w_{sub.k+1} = w_{sub.k} - \mu_{sub.m} \cdot \text{gradient}.J_{sub.m}(w)$ -
vertline. $w = w_{sub.k}$, where: $w_{sub.k+1}$ is a tap weight vector at the $kth+1$ instant, $w_{sub.k}$ is said tap weight vector at the kth instant, $\mu_{sub.m}$ is the gradient step size, and $\text{gradient}.J_{sub.m}(w)$ is the gradient of said cost function.

However Shen discloses wherein said gradient recursion algorithm is defined by the equation $w_{sub.k+1} = w_{sub.k} - \mu_{sub.m} \cdot \text{gradient}.J_{sub.m}(w)$ -
vertline. $w = w_{sub.k}$, where: $w_{sub.k+1}$ is a tap weight vector at the $kth+1$ instant, $w_{sub.k}$ is said tap weight vector at the kth instant, $\mu_{sub.m}$ is the gradient step size, and $\text{gradient}.J_{sub.m}(w)$ is the gradient of said cost function (col. 2, lines 29-44, col. 4, lines 1-40).

Therefore it would have been obvious to one of ordinary skill in the art to modify Gevorgiz et al. in view of Garth in further of Shen to incorporate wherein said gradient recursion algorithm is defined by the equation $w_{k+1} = w_k - \mu_m \text{gradient}.J_{\text{sub}.m}(w)$, where: w_{k+1} is a tap weight vector at the $k+1$ instant, w_k is said tap weight vector at the k th instant, μ_m is the gradient step size, and $\text{gradient}.J_{\text{sub}.m}(w)$ is the gradient of said cost function for rapid convergence to ensure short adaptive responses to transient noises (Shen, col. 3, lines 29-31).

Allowable Subject Matter

7. Claims 2, 5, 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims. The following is a statement of reasons for the indication of allowable subject matter: The instant application discloses a method of equalizing a radio frequency signal. Prior art references show similar methods but fail to teach: **“wherein said cost function is defined by the equation $J_m(w) = E[(z_k^2 - A)^2 + [\cos^2(z_{kr}^2 d) + \cos^2(z_{ki}^2 d)]]$, where: w is a tap weight vector, $z_{\text{sub}.k}$ is the output of the equalizer after the k th iteration, A is the desired amplitude in the absence of interference, $z_{\text{sub}.kr}$ and $z_{\text{sub}.ki}$ are the real and imaginary parts of $z_{\text{sub}.k}$, respectively, and β is a weighting factor”**, as in claims 2 and 7; **“wherein said M-CMA circuit adjusts the tap weights of said**

plurality of feed forward equalizers and said decision feedback equalizer", as in claim 5.

8. Claims 9-12 are allowed.

9. The following is a statement of reasons for the indication of allowable subject matter: The instant application discloses a method of equalizing a radio frequency signal. Prior art references show similar methods but fail to teach: "**a modified constant modulus algorithm (M-CMA) circuit for adjusting the tap weights of said plurality of feed forward equalizers and said decision feedback equalizer"**, as in claim 9.

Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cicely Ware whose telephone number is 571-272-3047. The examiner can normally be reached on Monday – Friday, 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Chin can be reached on 571-272-3056. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9314 for regular communications and 703-872-9314 for After Final communications.

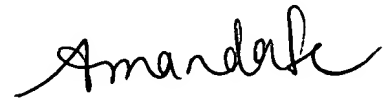

Application/Control Number: 09/828,324
Art Unit: 2634
